

Oleksii Zhlukha

AI Automation Engineer — n8n, LLM agents, Next.js

Seville, Spain · Remote (CET) · workinaiengineering@gmail.com

github.com/Alexolimb · alexolimb.github.io/portfolio

Eligible to work in Spain/EU · Ukrainian & Russian (native), English (fluent, working language), Spanish (basic)

Self-taught automation engineer who ships end-to-end systems alone: from a production n8n server to Telegram bots, LLM agents and web apps. I take a business problem, wire the integrations, run it in production and keep it alive. Business degree and years of direct client work — I can explain a system to the person paying for it, not only to a developer.

WHAT I BUILT

Production automation server — n8n on a Hetzner VPS · 2026, still running

- 79 live workflows out of 112 on a self-hosted n8n instance, 24/7 uptime, Docker on a Linux VPS.
- 30 Telegram bots in production: lead capture, content pipelines, reporting, internal assistants.
- Cut recurring API cost to near zero by migrating agent workloads from paid LLM APIs to free tiers (Gemini, Cerebras), switching providers by hand when one goes down — no loss of function.

LLM agents and RAG over a private knowledge base · 2026

- Multi-agent setups with tool calling: agents that search, decide and write back into the system.
- Retrieval over a personal knowledge vault, so answers cite real internal documents instead of guessing.
- Local models served from my own GPU (Ollama) for bulk, low-value work; paid models only where quality is measurable.

Web apps — Next.js and Flutter · 2025–2026

- Client website (English tutoring business) — live, built and maintained end to end: design, copy, deploy, domain.
- Personal products in active development: an investment tracker (Flutter + backend), a planner app, a learning app with a 220-lesson curriculum.

Video production automation · 2026

- Automated the repetitive part of my own editing job: transcript-to-clip selection, naming conventions, subtitle checking, montage tables — turning a multi-hour manual pass into a review step.

EXPERIENCE

Video Editor — Evy Media (US company) · 2026 – present · Remote

- Editing for a US content studio, working remotely across time zones in English.
- Built internal automation for the editing pipeline (see above) on my own initiative; it is now part of how the work gets done.

Video Editor — Semen Volkov Production, Ukraine · 2024 – 2025

- One of the largest video production companies in Ukraine. Editing and post for commercial clients; also worked as assistant camera operator on shoots.

Earlier — digital marketing and English teaching

- Ran paid traffic for small businesses and taught English one-to-one. Where I learned to scope work with a client and be responsible for a result they pay for.

SKILLS

Automation & AI: n8n (self-hosted, production), LLM APIs (Anthropic, Gemini, Groq, Cerebras), agents & tool calling, RAG, prompt engineering, local models (Ollama), Telegram Bot API

Web: Next.js, React, TypeScript/JavaScript, HTML/CSS, Flutter/Dart

Infrastructure: Linux VPS (Hetzner), Docker, webhooks & REST APIs, environment/secret management, Git & GitHub, Vercel

Other: Adobe Premiere Pro, technical writing and documentation, English–Russian–Ukrainian

EDUCATION

BSc, Business Administration · Dnipro University of Technology, Ukraine · 2020 – 2024

- Certified acting course diploma — used daily on client calls and camera work.
